

WE ARE INNOVATION LEADERS! 🏆 Our research activities have been awarded the "INNOVATIVE THROUGH RESEARCH" seal of quality by the Stifterverband.

The Stifterverband acts on behalf of the Federal Ministry of Education and Research (BMBF) and collects data on the research and development activities of companies in Germany.

The seal, awarded by the Stifterverband für die deutsche Wissenschaft e.V. (Donors' Association for the Promotion of Sciences and Humanities in Germany), is given to companies that excel in research and development (R&D).

Research and innovation have always been important components of corporate policy at STS! Power electronics is highly dynamic and everything is getting smaller and more power dense.

Our Research and Development Team (R&D) is therefore dedicated purely to the future development of components for solutions up to three, five or ten years from now.

We also work very closely with research institutes, corporations and important experts in the field of power electronics.

For us, it is important to always be at the hub of the times and to always break new ground.
